

Dear valued customers,

the availability of the Roche Microsampler Protect is currently limited or uncertain in many areas. To ensure your continued reliable supply, we would like to draw your attention to our proven alternative:

AK-FIX Blood Gas Collection System

Your advantages at a glance:

- Comparable sample volume (~230 µl)
- System independent and compatible
- Lithium-heparinized capillary – ideal for blood gas analysis
- Integrated auto-stop function for safe and easy use
- Shatterproof plastic system
- Available immediately from stock with good shelf life

The AK-FIX system is already successfully used in many facilities and is ideally suited as a replacement for previously used microsampler systems.

For further information, the AK-FIX Technical Datasheet is attached.

We would be happy to assist you with the transition or provide you with samples.

Please do not hesitate to contact us if you have any questions or would like a customized quote.

Sincerely,

Your team from LDS Labor Diagnostik Systeme GmbH
